

THE AD HOC GROUP FOR MEDICAL RESEARCH

The Ad Hoc Group Fiscal Year 2025 Recommendation

The 372 undersigned members of the Ad Hoc Group for Medical Research, which includes organizations representing patients, scientists, health professionals, research and academic institutions, educators, and industry, recommends at least **\$51.303 billion for the National Institutes of Health (NIH)**, which would represent a \$3.579 billion or 7.5% increase over the comparable FY 2024 funding level approved with bipartisan support by the Senate Appropriations Committee. This investment would allow NIH's base budget to keep pace with the biomedical research and development price index (BRDPI) and allow meaningful growth of roughly 5%.ⁱ

People everywhere benefit from medical research supported by the NIH, which serves as the **foundation for nearly every preventive intervention, diagnostic, treatment, and cure in practice today**. Each year, NIH awards over 60,000 grants that directly support more than 300,000 researchers across labs and other settings in **nearly every congressional district nationwide**.ⁱⁱ Their research is our best hope to overcome existing and emerging health threats, including cancer, Alzheimer's disease and related dementias, diabetes, Parkinson's, and the full range of other diagnoses that patients, families, and communities face every day. To maximize the opportunities that medical research provides to improve health from urban centers to rural frontiers, we must ensure predictable, robust growth in NIH investment. Strong growth above BRDPI for the NIH provides critical support for additional research across the agency's diverse areas of study, conducted nationwide and through the NIH's 27 individual Institutes and Centers.

In addition to the health benefits that medical research promotes, the federal investment in this lifesaving work also has a **multiplier effect in local and regional economies**, catalyzes new industries, enhances the **U.S.'s global competitiveness**, promotes our **national security**, establishes viable career paths for the **next generation of scientists**, and generates additional **high-quality jobs in communities nationwide**.ⁱⁱⁱ Researchers are driving economic activity, creating patents, and supporting the creation of new drugs.ⁱⁱ

Over the years, distinguished leaders and experts in medical research have recommended sustained real growth for the NIH through increases that exceed inflation by 4-6%.^{iv, v, vi, vii} The Ad Hoc Group's FY 2025 recommendation would represent a step forward toward these objectives by expanding the NIH's capacity to make tangible progress against the wide range of diseases and conditions facing families and communities nationwide.

Additionally, in FY 2023, Congress authorized the newly established Advanced Research Projects Agency for Health (ARPA-H) as an autonomous agency within the NIH with \$1.5 billion to advance ARPA-H's unique focus on "high potential, high impact" research beyond what is traditionally supported by the NIH. In addition to the Ad Hoc Group's FY 2025 recommendation of at least \$51.303 billion for NIH's base budget, many of our organizations also have been engaging ARPA-H and separately support renewing the ARPA-H investment

in FY 2025. As this new entity ramps up its work in targeted research areas and its focus on accelerating the development of commercial products, our broad-based, national community of diverse stakeholders is unanimous in emphasizing that for ARPA-H to be maximally successful, any funding for ARPA-H should supplement, rather than supplant, the essential foundational investment in the NIH.

We are grateful to Congress for making meaningful annual funding growth for the National Institutes of Health (NIH) a key, bipartisan national priority over the last decade. NIH-funded biomedical, behavioral, social, and population-based research improves our understanding of fundamental life and health sciences, equips the nation to combat both known and unprecedented health threats, and converts the hope of improved health into a reality for patients and their families.

We urge lawmakers to continue to support patients and discovery, to ensure a funding allocation for the Labor-HHS Subcommittee that allows for the necessary investment in NIH and other agencies that promote the health of our nation, and to work expeditiously to complete FY 2025 appropriations in a timely manner. Our nation's health depends on it.
