Dear Speaker Ryan, Leader McCarthy, Leader Pelosi, Leader McConnell, and Leader Reid:

The 229 undersigned members of the Ad Hoc Group for Medical Research write to thank you for your leadership in championing sustained, real growth in medical research funding, and to urge inclusion of the Senate-proposed $34.1 billion for the National Institutes of Health (NIH) in a final fiscal year (FY) 2017 spending package by the end of this calendar year. The Ad Hoc Group for Medical Research is a coalition of patient and voluntary health groups, medical and scientific societies, academic and research organizations, and industry, dedicated to enhancing the federal investment in biomedical, behavioral, social, and population-based research supported by NIH.

Your bipartisan commitment to reliable and meaningful growth in the NIH budget is essential in enabling researchers at universities and research institutions in all 50 states to pursue emerging scientific opportunities to address the nation’s most pressing health needs. As you know, in addition to bringing hope and improved health to patients, the ongoing success of the medical research enterprise also drives local and national economic activity, strengthens U.S. competitiveness in an increasingly innovation-based global marketplace, and inspires future generations of scientists to commit to careers in research.

Continuing the momentum of your FY 2016 investment in NIH is key to ensuring that the nation can continue to accelerate the development of life-changing cures, pioneering treatments, and innovative
preventive strategies. Our organizations strongly support an approach to the final FY 2017 spending package that maximizes the federal support for NIH and avoids additional continuing resolutions (CR) past December. Aside from the budget implications, CRs create inefficiencies and add uncertainty to a system that is already under stress. We strongly urge lawmakers to make finalizing the FY 2017 appropriations a priority.

Additionally, while we all support a robust investment in NIH in the final package, many of our organizations also support investments across the health care continuum that complement and extend NIH’s work. We recognize the challenge that appropriators face drafting spending bills under impractical budget caps; we encourage Congress and the Administration to work in a bipartisan manner to relieve pressure on discretionary spending and ensure any final budget agreements reflect a strong commitment to the nation’s health.

Once again, we commend you for continuing to recognize NIH as a critical national priority, and we look forward to working with you to secure $34.1 billion for the agency in FY 2017.

Sincerely,
