Personal Preparation	<p>.Ongoing faculty development through attendance at university presentations as well as STFM and AACOM Conferences</p> <ul style="list-style-type: none"> • Designed and implemented a Simulation Laboratory • Increased participation in item writing for the National Board of Osteopathic Medical Examiners • Consistent research of Evidence Based Practices to incorporate into lectures to keep information that is delivered current • Attendance at numerous Academic Career Development events as outlined in vitae

Personal Reflection/
Process for
Improvement

.Continual evaluation and revision of courses after feedback from students and other lecturers

- Participation as a member of the Peer Evaluation Committee and helped design a draft of a faculty evaluation instrument. This form was recently approved and evaluations of faculty are currently ongoing
- I initiated a 360 evaluation of my job performance by seeking input from my colleagues, dean and staff. Results were discussed with the COM and Faculty Development Dean with the goal of re-surveying the same people in a year's time to monitor improvement in my performance
- To witness best practices throughout the osteopathic community, I volunteered to become a COCA accreditation site evaluator, and underwent training in January 2009. My personal goal is to bring ideas back to campus to improve our curriculum at DMU

Revised 10/27/11

<p>2004-2008</p> <p>Physical Diagnosis I – 33 one hour lectures with 12 two hour lectures per year delivered to 277 osteopathic and podiatry students</p> <p>Physical Diagnosis II – 48 one hour lectures in the form of standardized patient presentations, DxR computer based case simulations, and human patient simulations. Labs, practicals and examinations accounted for another 71 contact hours with students</p> <p>Dermatology – I deliver 5 of 14 lectures in this short course followed by a written multiple choice examination and visual exam where students have to diagnose dermatological disorders by sight</p> <p>Medical Ethics I & II – I assumed the responsibility of revising this course in 2004. Medical jurisprudence and controversial topics such as cloning and physician assisted suicide were added to our discussion groups</p> <p>Due to my fulltime position as a medical educator, I have high numbers of contact hours with students</p> <p>I am the main clinical faculty educator during the students’ first two years of medical education on campus. Since I have assumed this position, our students’ board scores have been consistently higher than the national average</p>	<p>Physical Diagnosis I – On a 15 Likert scale, my average score from students in the class of 2007 was 4.07: 2008, 3.91 and 2009 4.32. Due to changes in institutional software, results are not available in graphic form prior to 2007 (see Appendix A1 for details)</p> <p>Physical Diagnosis II – Using the same Likert scale, my average score for the last four years were 4.12, 4.07, 4.16, and 4.08 for the class of 2007-2010 respectively (see Appendix A2 for details)</p> <p>Dermatology – My average score from students evaluated over the last five years is 4.48 on a 15 Likert scale. (see Appendix A3 for details)</p> <p>Medical Ethics I & II – This course is a pass/fail course, so no digital evaluative figures are available</p> <p>Numbers of annual contact hours with students range from 246 to 546. Contact hours includes PBL sessions, lectures, both simulated and standardized patient laboratories, Physical Diagnosis labs, and examinations/practicals (see appendix B)</p> <p>My areas of responsibility include the history and physical section of Level I COMLEX and the history and physical as well as family medicine sections of Level II COMLEX. As outlined in Appendix C, our scores are consistently higher than the national mean and in general are higher than prior to my arrival in 1999</p>

<u>Descriptions of Quantity</u>	<u>Evidence of Quality</u>
	<p>Named Favorite Preclinical faculty member by Class of 2007, 2008, & 2009</p> <p>Distinguished Service Award from COM Faculty – 2005</p> <p>Dean’s Leadership Award – 2004</p> <p>Recipient of the SOMA George W. Northup Outstanding Educator of the Year Award – 2001</p> <p>Letters of support for nomination from Deans, colleagues, and students (see Appendix D)</p> <p>Comments from preceptors on the performance/skills of our third year students on rotation (see Appendix E)</p>
Discussion of Breadth	
<p>In my role as a fulltime educator at the University, I lecture to Physical Therapy, Physician Assistant, Podiatric, and Osteopathic students. I am responsible for early introduction of communication skills, history and physical examination development, documentation, and diagnostic/management skills. I use multiple educational tools to train the students, including computerbased case scenarios, standardized patient assessment labs, human patient simulation labs, and cardiac simulation. I oversee numerous community medicine events annually, providing a much needed service to our underserved population while allowing students early clinical exposure to patients. I also am a strong advocate for health literacy and participate regularly in our Minimedical school lecture series for the public. I also contribute a monthly article on current medical issues for the health forum section of our regional newspaper.</p>	

Personal Statement

I became a faculty member at the University immediately after completing my family medicine residency in 1987. After slightly over two years, I realized I would be a better educator if I had more clinical experience. I purposefully sought out a practice in rural Iowa where I had to make decisions on my own. I continued to precept students in my office since I had a strong desire to keep my hand in teaching. After ten years in solo practice, I was approached by the Chair of the Family Medicine Department about returning as a faculty member at the University. I felt I had gained tremendous skills as a clinician, and that I would have greater credibility with students after a decade of providing patient care. I subsequently returned to the academic world in 1999, and have ultimately been promoted to Chair of the department of Family Medicine. When I returned to fulltime teaching, I made the following personal and professional goals:

1. Promotion of patient safety
2. Increased medical knowledge and clinical skills for students
3. More refined teaching skills for myself
4. Advocate of improved health literacy for the public
5. Positive role model for students
6. Incorporating osteopathic patientcentered philosophy into the practice of medicine and the educational arena.

After nearly 12 years in academics, I feel I have made significant progress in reaching all of these goals as outlined in the following narrative.

Promotion of patient safety

I lecture to my students on a regular basis regarding reduction of medical errors; the need for thorough documentation and legible handwriting, etc. Due to overwhelming evidence indicating the high incidence of prescription errors, I supported the incorporation of electronic health records and eprescribing into our on campus practice. I invited an attorney involved in medical malpractice to deliver a medical jurisprudence course in 2003 which is still being given annually. I consistently impress patient safety upon my students, reminding them to “do no harm”.

Increased medical knowledge and clinical skills for students

As a medical educator, I want my students to be as clinically knowledgeable as possible once they leave campus for rotations. In an effort to improve clinical knowledge and skills, I made significant changes to the Physical Diagnosis course during first and second years. First year students now have three encounters with standardized patients (originally they had no exposure to SPs until second year). I also started including a clinician in the room during practicals since our video cameras weren’t adequate in confirming stethoscope or hand placement. For second year students, I introduced a weekly case presentation from the DxR software program from Southern Illinois University. To prepare students for computerized based testing, I wrote case based questions for each system that are answered by students following each standardized patient encounter. I increased the number of SP encounters from 4 to 8, one of which involves an ethical dilemma such as drug abuse, domestic violence, request for physician assisted suicide, etc. Due to our inability to create structural lesions in our standardized patients, I added a viscerosomatic area of tenderness in each scenario. Students now have to palpate the paraspinal muscles and check range of motion in each case to receive patient affirmation of tenderness – the area of which aids the student in reaching a correct diagnosis.

Our students have always done well in non urgent standardized patient scenarios. I wanted students to be exposed to more urgent, critically ill “patients”. I requested funding in 2006 to design and implement a simulation lab. I traveled to various sim labs around the country to pick up best practices and designs. The only space available to build the sim lab was an old micro lab. I worked with a technician in Tennessee to design the best lab we could with our space limitations. I personally met with contractors and administration to insure the design was followed. Remodeling started in November 2006 and our open house took place in May 2007. For the first year, our second year students had four simulation experiences (including an infant resuscitation, adult ACLS case, delivery of a baby, and a pediatric or adult critical care case). Due to increased availability of lab hours, students will have 8 simulation experiences this academic year. These experiences, in addition to our 8 standardized patient cases, have improved our student’s clinical knowledge and skills. Included in Appendix B are board scores documenting improved performance in the areas I am responsible for (history and physical examination, family medicine). Although I can’t state with certainty which of these curricular changes is responsible for improving the scores, I have no doubt that all of them have been beneficial. I am also including (in Appendix D) some comments from preceptors who take our third year students on rotation. Since I am the only fulltime clinician responsible for the introduction of clinical skills and patient care, I do feel my teaching has had a significant positive impact on student outcomes.

More refined teaching skills for myself

My role as a solo practitioner was educational, but I realized I needed some faculty development as a medical educator once I returned to fulltime academics. My vitae outlines the numerous faculty development

conferences I have attended. I have delivered three presentations at AACOM conferences in 2007 and 2008, and have had another accepted for 2009. I became a member of the Society of Teachers of Family Medicine and the Society of Osteopathic Medical Educators to avail myself of educational

opportunities. I am registered to attend the Predoctoral Directors Leadership Workshop at the STFM conferences in January and April 2009.

I wanted to improve my test question writing skills, so I started contributing items to the NBOME in 1999. I became a Regional Reviewer for NBOME in 2003, which led to my appointment as Vice-Coordinator of Level III in 2005. As of October 2008, I assumed the role of National Coordinator for Level III.

Improved health literacy for the public

I teach students about the impact of lower health literacy on patient outcomes. As Chair of our Family Medicine Department, I advocate participation of faculty and students in our numerous Community Medicine events. I volunteer at church and civic groups to speak on health promotion and preventive health care topics. I lecture in our annual Mini-Medical School lecture series, which enrolls between 300 and 400 participants. I also volunteer to write a monthly column for The Des Moines Register Health Section on timely topics such as influenza, weight maintenance over the holidays, insurance issues, etc.

Positive role model for students

I volunteer hundreds of hours at community service events to emphasize to students the need to get involved and give back to their communities. I have been faculty advisor for the student chapter of ACOFP for the past 21 years. I spend hours of time each week in labs with students, developing their interviewing and physical examination skills in first year followed by their diagnostic and management training in second year. I receive great reward from being an educator; after having been an anesthesiologist and a solo practitioner in rural Iowa, I realize I was supposed to be a teacher all along. It has just been a convoluted, fascinating journey getting here.

Incorporating osteopathic patient-centered philosophy

I encourage students to assume a holistic view of patients- that financial, marital, psychological aspects compound physical disorders of our patients. I lecture students early in their first year about appropriate doctor-patient communication, and that no patient is ever as important to you than the one sitting in front of you. I encourage students to give of their hearts as well as their mind – at times we can't cure all of our patient's ailments, but we can always care about our patients. My years of private practice have provided me with a legion of stories that I relate to students to make medicine come alive for them. I urge all of them to teach those who come after them as well as their patients. I ask them to display their graduation certificate and their license to practice medicine proudly. We are osteopathic physicians, striving not only to care for our patients, but to care about our patients. We touch our patients, whether it is through manipulation for low back pain or a gentle touch on the shoulder to express empathy for the death of a loved one. I tell my students to be proud of being an osteopathic physician and shoulder the responsibility of the profession with great care and diligence.

Table of Appendices

Appendix A-1 Graph of Physical Diagnosis I scores for the last 3 years

Appendix A-2 Graph of Physical Diagnosis II scores for the last 4 years

Appendix A-3 Graph of Dermatology scores for the last 5 years

Appendix B Copy of Faculty Effort Report documenting number of contact hours with students. Due to page restriction, only the most recent three years are attached (documentation for the other two years can be provided upon request)

Appendix C Table of COMLEX Level I and II scores for the past 4 years

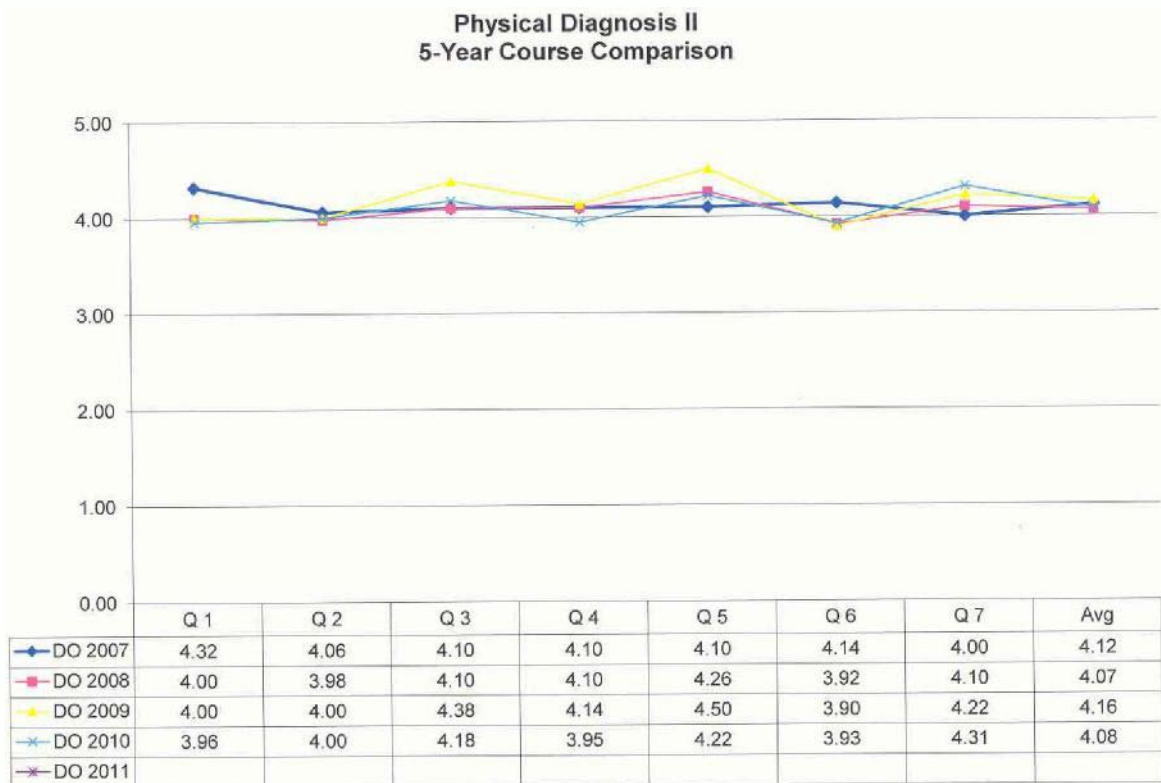

Appendix D Letters of support from college Deans (Dr. x, and Dr. y), colleagues (Dr. z and Dr. d), and students/residents (a & b)

Appendix E Written comments from preceptors regarding third year student performance in their clinics

Appendix E

Family Practice Evaluation Comments from Class of 2010- Student/Preceptor

Relates well to patients. Very good at diagnosis and OMM related problem. Very good student, assignment with accuracy and completeness.
(Student) is very academic. He looks up topics and presents them very well. He handles himself with much poise and this is impressive for a 3rd year student. He communicates very well and my staff, patients and I enjoyed having him here.
Very good in taking history focusing on preventing problems. Good rapport with patients.
Overall, outstanding! Excellent knowledge, motivation, endurance, compassion and people skills. Tessie is always in a good mood! An exceptional student. She functions at the level of a resident more and more!
Good history taking, PE skills. Concise pertinent oral presentations. ...then most (esp. for 1st rotation.)
(Student) demonstrated excellent rapport with patients, staff and residents. History and Physicals, as well as progress notes, were detailed and focused. He was above level for a 3rd year student on his first rotation.
Enjoyed having her. Presented herself well to patients and established rapport quickly. Good sound medical knowledge in spite of just starting clinical rotations. Well liked by staff and easy to get along with. Punctual and reliable.
This was (Students) first clinical rotation. He demonstrates a good fund of basic medical knowledge beyond his peers. He is open to constructive criticism and quickly integrates new knowledge and skills. He is personable and relates well with both patients and staff. He has an obvious comfort in patient
Gets along well with staff. Is considered knowledgeable and advanced beyond usual expectations for MS3, will make an excellent physician.
One of best students to rotate with me. I hope she can come back next year for a 4th year rotation.
(Student) is bright and enthusiastic and hard working. She is self motivating and learns quickly. She is doing great for where she is in her education process. Great personality. Gets along well with patients and staff members. Develops a rapport with patients, respectful. Followed up with cases in office with reading and conversation. Eager to learn with good base of knowledge.
(Student) is an excellent medical student. She excelled on her first clinical rotation. She is very flexible, is able to separate her educational needs and the needs of the patients. She was willing to take on tasks as they became available, i.e went to the emergency department to do an H&P. She showed great initiative and has an excellent understanding of the health care system and the characteristics of family medicine.
He is very empathetic and poised around the patients. His notes are thorough yet concise.
Excellent history and physical exam skills. Good precise progress notes.
Enjoyed having him here. Good basic knowledge in spite of limited clinical experience. Good rapport established quickly with patients and good interactions
Above average in knowledge base, advances skills effectively.
Exceptional communication skills and empathy with patients. Advanced ability in history and physical exams.
Good communication skills/motivated. will make excellent resident for any program.
Good history taking skills. Eager and motivated to learn. Pleasant and cooperative. Well liked by residents, staff, patients and families. Asked great
Good initiative and self-learning. Eager to research new topics. Gains patient trust easily and develops relationships.
(Student) has a strong motivation to learn and perform well. He asks appropriate questions and implements the knowledge that he gains from them.
This student was advanced for training. This early in his career he was already asking advanced questions and showing that he understood the processes we were seeing. He has exceptional hand skills and procedurally is advanced. Worked well as part of the office team.
Very professional, strong knowledge base, very self motivated and willing to perform independent work. Well above average for her level of training. Shows strong commitment to osteopathic profession and integrates the osteopathic philosophy in every day medicine.
Excellent. Very pleasant. Has wonderful interpersonal skills. Well loved by patients. Has self directed learning and researches on new topics and presents them to me spontaneously. Very efficient and concise in history taking. Able to work independently. has a strong desire to learn.
(Student) does a wonderful job of doing thorough history and physicals. She listens to patients. She has a positive attitude and was a pleasure to work with
Very personable, easy to work with. Good rapport with patients. Overall good knowledge base.
Organized, good overall knowledge base, actively pursues details, compassionate, good bedside manner.
Excellent communication skills. Team player, excellent bedside manners. I had several compliment remarks by many patients. All my staff enjoyed having (student). She will be excellent in Primary Care specialty.
Good knowledge base. Performs above level of most 3rd year students. Well-liked by patients and staff.
Strengths in OMT, very thorough histories and physicals elicits subtle finding, good team member. Very cooperative. Great improvement in differential diagnosis
(Student) demonstrates one of the best work ethics I have seen so far in a med student. She consistently sought out opportunities to learn. She is extremely professional and receptive to comments. Her medical knowledge is at the level of a 4th year student. I would highly recommend her for any future residency.
